A SMART CHOICE FOR ALL CLIMATES

# San Group Bevel Siding

## BEST CHOICE FOR APPEARANCE

**San Group Bevel Siding** is manufactured with the finest Western Red Cedar to provide the ultimate in quality appearance. Consistently manufactured to exacting standards through our kiln & planer, value-added facilities. Western Red Cedar delivers on not only its exceptional building properties but its beautiful rich color. Properly finished and maintained it ages gracefully and can be enjoyed for many years. San Group Bevel Siding features straight even grain, uniform machine finish and is available in grades ranging from CVG, AYE&Btr to STK with select grade knots for the discerning buyer. Featuring a reversible installation, the user can select between smooth face or re-sawn appearance on the reverse face. The sawn face adds an appealing texture to the finished project.

## BEST FOR QUALITY & PERFORMANCE

One of the easiest woods to work with Western Red Cedar is dimensionally stable, lightweight, strong, versatile and is naturally resistant to decay and insect damage. **San Group Bevel Siding** is easy to saw, glue, join and accept nails and most other fasteners alike. The cellular structure and insulation value of Western Red Cedar featured as paneling, ceiling or siding in your building or project translates to a desirable coolness in summer and comforting warmth in winter. Western Red Cedar also suppresses and absorbs sound.

SIZE (in inches)	BUTT (in inches)	NET WIDTH (in inches)	TIP (in inches)	PCS PER BUNDLE	VOLUME PER PACKAGE	LENGTHS
11/16X8	11/16	7 <sup>1/4</sup>	3/16	8	288	8-20PTL

## FINISHING & MAINTENANCE

Western Red Cedar is pitch and resin free, making it an excellent base for paints and stains. All finishes and paints are recommended to be applied within two weeks or sooner of installation. Longevity and performance increase exponentially with application to un-weathered product. Power washers are not recommended for use on Western Red Cedar.

**San Group Bevel Siding** features straight even grain, uniform machine finish coupled with either a beautiful clear or select grade knotty look that will meet or exceed standards set out by the competition.

## BEST FOR THE ENVIRONMENT

Wood harvested from responsible sources is by far the best building choice. Wood is a natural, renewable resource that once harvested can be replanted for use of future generations. San Group, as a responsible, good neighbour, meets the highest environmental standards on harvesting set out in British Columbia.

Western Red Cedar's natural oils act as a preservative and protection against decay and insects eliminating the need of harmful chemical treatments. For best results, Western Red Cedar should be coated on all sides prior to installation. Factory finishing, where available, is preferred and recommended.

Corrosion resistant nails such as hot-dipped, galvanized aluminum and stainless steel are also recommended.

More detailed information about finishing and maintenance is available from your San Group Sales Representative
